instruct Please read this text carefully.

In recent years, meat consumption is increasingly debated because of concerns about health and safety, animal welfare, and environmental sustainability. In many countries, the number of vegetarians and vegans has been steadily increasing and many more people are deciding to cut down on their meat consumption. This trend is supported by an increasing availability and affordability of meat alternatives. In addition, many books, blogs, and government websites are available to inform people about the negative consequences of meat consumption and about alternative diets and recipes for a healthier and more sustainable lifestyle.
